# ELICOMPANY BELL 206 JETRANGER

Simple. Reliable. Economical.
It's probably the most recognizable helicopter in the world. You're familiar with it – you've seen it flying for news stations, police patrols and ferrying VIPs. It's the Bell 206 JetRanger family of helicopters, and it would become the most successful commercial helicopter ever produced.
Well over 7,000 Bell 206s have been produced since 1967, including both civil and military versions – outnumbering any other commercial helicopter.
A passenger can sit in the front left seat next to the pilot and two adults will be very comfortable in the back of the JetRanger. With large windows, ample ambient light provides excellent visibility for the working environment and exceptional field of view.
The 206 with the Allison (now Rolls-Royce) engines give it the best single-engine safety record for helicopters.

## KEY FEATURES AND BENEFITS

- Simple, two-blade rotor system for superior hover and autorotation performance
- The Rolls-Royce 250 turbine engine design with over 150 million flight hours logged
- Rupture resistant fuel system
